OUR EXPERTISE

CO-GENERATION

Cogeneration Systems are often based on thermal electrical generating stations (such as fossil fuel and nuclear plants), where the energy content of a resource (normally a fossil or nuclear fuel) is converted to heat (in the form of steam or hot gases) which is then converted to mechanical energy (in the form of a rotating shaft), which in turn is converted to electricity.

Among the notable Co-Generation projects, we have completed include:

- Muda Paper Mill, Kajang (Phase I & II) – CHP - Commissioned 2006 & 2010
- Perstima Utility Sdn Bhd, Pasir Gudang – CHP – Commissioned 2011
- Invest Energy Sdn.Bhd (Etika Dairies, Meru)-CHP – Commissioned 2019
- Kiev-CRG Sdn.Bhd (CareGlove)-CHP – Commissioned 2021
- Hartalega Berhad (Phase I & II), Sepang – CHP – Commissioned 2018 & 2021

Cogeneration / Combined Heat & Power (CHP)

- Gas engine and gas turbine CHP solutions for industrial facilities
- Customised heat recovery systems for steam generation, drying processes and chilled water
- Integrated CHP designs to improve overall plant efficiency and energy utilisation
